Retrospective report

User Story - Detailed Services

User Story Status
- The **"Detailed Services"** user story was fully implemented, meeting the acceptance criteria.
- The final output included all required sections: service descriptions, images, CTAs, timetable, and contact information.
- Minor adjustments were made to ensure the final product fully aligned with the acceptance criteria.

What has been achieved
- A comprehensive "Services" page was successfully created, meeting all project goals.
- Integrated images, detailed descriptions, and CTAs effectively enhanced the user experience.
- Timetable and contact information were displayed clearly and met accessibility standards.
- AI tools were utilised to streamline content creation and page design, significantly speeding up the development process.

Areas for improvement
- Some AI-generated content required manual adjustments to ensure consistency and responsiveness across different devices.
- Improved planning could reduce the need for manual corrections after using AI tools.
- Future projects would benefit from clearer guidelines on when to rely on AI tools versus manual coding.

Lessons learned
- AI tools can accelerate development but require human oversight to maintain quality and ensure alignment with project goals.
- Reflecting on the process highlights the need for balancing AI use with manual interventions for customisation.
- Documenting the process is crucial for continuous improvement and helps identify areas where AI was beneficial and where it fell short.
